Nutrient Release Formula™

Sulfur, Hydrogen, Oxygen, Carbon and Nitrogen

Water is the mediator between the Forces of Life (the Life Force). Clay is the mediator between the Forces of Growth.

“Sulfur is the mediator between the physical in the world and the omnipresent Spirit with its formative power. . . Sulfur is actually the carrier of the Spirit . . .” (Ref. Steiner’s Ag Lectures p.45, by Malcolm Gardner.)

Years ago, I decided to make some Horn Sulfur but never found a satisfactory use for it. Now I have.

Sulfur “moistens” the movement of ether through nitrogen (intelligence), carbon (the physical framework), oxygen (the Bearer of Life) and hydrogen (it dissolves and disperses everything) into the physical manifestation of life (or Spirit) on Earth (the physical plane). According to Dr. Steiner, without sulfur, none of these elements can work their individual tasks and work together the way they are supposed to do.

All nutrients that plants use, with the exception of nitrogen, require sulfur to be present for the plant to take them up. Steiner said that Spirit “moistens” It’s fingers with sulfur. Given this insight, it can also be said that the presence of sulfur in soil facilitates the movement of these elements into plants. Sort of like a lubricant makes an engine work better and work the way it should.

The presence of sulfur in a field is essential for the release of these nutrient elements for use by plants. Soils deficient in sulfur are generally considered less fecund than soils with normal or higher amounts of sulfur.

To alleviate the problem of low available fertility and get the power of sulfur into the soil, and release these elements which construct the fertility of soil, I have made a remedy out of Horn Sulfur which, when applied to soil, releases the fertility in that soil.

I call it my Nutrient Release Formula™. Apply it once or twice a year. Independent soil tests confirm, our general Field Sprays release nitrogen and other elements in the soil, making them available for plants at an average of 5% increase.

The creation of the Sulfur Nutrient Release Formula™ is another great advance of GW Agriculture in the field of Steiner’s Agriculture specifically, and keeps us in the lead in the field of agriculture in the entire world.
